Introduction

The AURA project was created with the aim of supporting emotional well-being by giving people a space where they can freely express their thoughts and feelings. In today's busy and stressful world, many individuals struggle to communicate their emotions, which can affect their mental health. AURA tries to solve this problem by providing a safe and comfortable platform for expression.

To present our idea clearly, we created a PowerPoint presentation (PPT). The PPT helped us explain our concept in an engaging and easy-to-understand way. My contribution included working on the PPT as well as taking responsibility as the Senior Developer of the project.

Contribution to PPT Making

I really enjoyed diving into the creation and refinement of our PowerPoint presentation. My main goal was simple: make sure every slide was clear, looked great, and was easy for the audience to follow. I focused on structuring the content logically, ensuring the presentation flowed like a story—from highlighting the problem to presenting our solution and detailing AURA's potential impact. I also handled the design, picking the right layouts, colors, and themes to give the presentation a visual punch. Beyond the visuals, I put a lot of effort into writing and polishing the text, keeping it simple, meaningful, and direct. I was especially proud to help land on our final tagline: "Where Your Emotions Find a Voice," which perfectly captures what AURA is all about. I made sure the whole presentation was consistent in terms of design, fonts, and formatting. Plus,

I acted as an editor, reviewing the slides and suggesting changes to boost clarity and professionalism. Ultimately, I aimed to inject creative energy into the PPT to make it engaging and relatable.

Role as Senior Developer

Apart from the presentation work, I took the role of Senior Developer in the project. My responsibility was to focus on the technical side and ensure that the project idea could be properly implemented.

I contributed to planning how the system would work and helped in designing the basic structure of the application. I worked on making sure that the platform would be simple to use and effective for users to express their emotions.

I also collaborated with my team to connect the technical part with the overall idea and design of the project. Whenever needed, I suggested improvements to make the system better and more efficient.

Through this role, I made sure that AURA is not just a concept, but something that can actually work as a real and helpful solution.

Conclusion

In conclusion, my role in both developing the PPT and working as the Senior Developer was important for the success of the AURA project. I contributed to making the presentation clear and engaging while also supporting the technical development of the idea.

This experience helped me improve my skills in teamwork, creativity, communication, and technical thinking. It also gave me practical exposure that will be useful for my future academic and professional growth.
